OBJECTIVE

Backend developer with 1.5+ years of experience in Python and Django, building RESTful APIs and scalable backend systems. Strong in database design, API development, and backend logic. Interested in developing efficient software solutions and contributing to engineering teams.

EDUCATION

Ratna RajyaLaxmi Campus | Tribhuvan University

Kathmandu, Nepal

Bachelors of Computer Application (BCA)

2025(Completed)

EXPERIENCE

Django Developer | Vasuki Tech

Oct 2025-Present

- Built REST APIs using Django for managing user data and backend logic
- Designed database schemas and implemented data validation to ensure consistency and reliability
- Integrated APIs with frontend applications and improved performance through efficient query handling

Backend Developer | NepBigyapan

Nov 2024-Sep 2025

- Developed backend for a College Management System covering enrollment, authentication, role-based access, and database design
- Built RESTful APIs and integrated them with React.js frontend for smooth data flow and user operations
- Worked on a construction company website backend, improving existing logic, optimizing performance, and handling system enhancements

PROJECTS

Learning Management System | Full Stack (Django REST + React.js) | [github.com](#)

- Built a full-stack LMS with course management, JWT authentication, and Khalti payment integration
- Structured course content and test assessments, with modern UI using Tailwind CSS and Shadcn UI
- Developed backend APIs for course management and assessment workflows

Postbox (Social App) | Django + Channels | [github.com](#)

- Built a social platform with posts, likes, comments, and real-time chat
- Implemented WebSocket-based messaging using Django Channels
- Developed server-rendered UI with Django templates and handled backend logic and data flow

Team Up (Community Event Platform) | Django + React Native | [github.com](#)

- Built backend APIs using Django for a community event platform enabling users to create and join local activities
- Developing backend APIs for event management, discovery, and participation
- Designing scalable system architecture for user interactions and workflows

TECHNICAL SKILLS

- **Languages:** Python, JavaScript, PHP, C
- **Frameworks:** Django, Django REST Framework, Laravel
- **Frontend:** React.js, Next.js, HTML, CSS, JavaScript
- **Databases:** PostgreSQL, MySQL, MongoDB
- **Tools & Technologies:** Docker, Redis, Git
- **Core Skills:** REST APIs, Backend Development, Database Design, JWT Authentication, Git, SQL
